

Human-Computer Interaction

Physiological Computing

Professor Bilge Mutlu

Today's Agenda

- » Topic overview: *Physiological computing*
- » Discussion: **New format:** *Breakout groups discuss, report back*
- » Q&A: *Assignment, project next steps & deliverables*

What is physiological computing?

Definition: physiological computing systems ... employ real-time measures of psychophysiology to communicate the psychological state of the user to an adaptive system.¹

What could the system be communicating?

- » Affective state, e.g., in affective computing systems
- » Cognitive state, e.g., in brain-computer interfaces
- » Physical state, e.g., in prosthetics, driving aids

¹Fairclough, 2008, Fundamentals of physiological computing

Is physiological computing only about sensing?

The field of affective computing encompasses both the creation of and interaction with machine systems that sense, recognize, respond to, and influence emotions.²

Systems that...

- » Sense
- » Recognize
- » Respond to
- » Influence

² Daily et al., 2017, Affective Computing

A broader definition of physiological computing

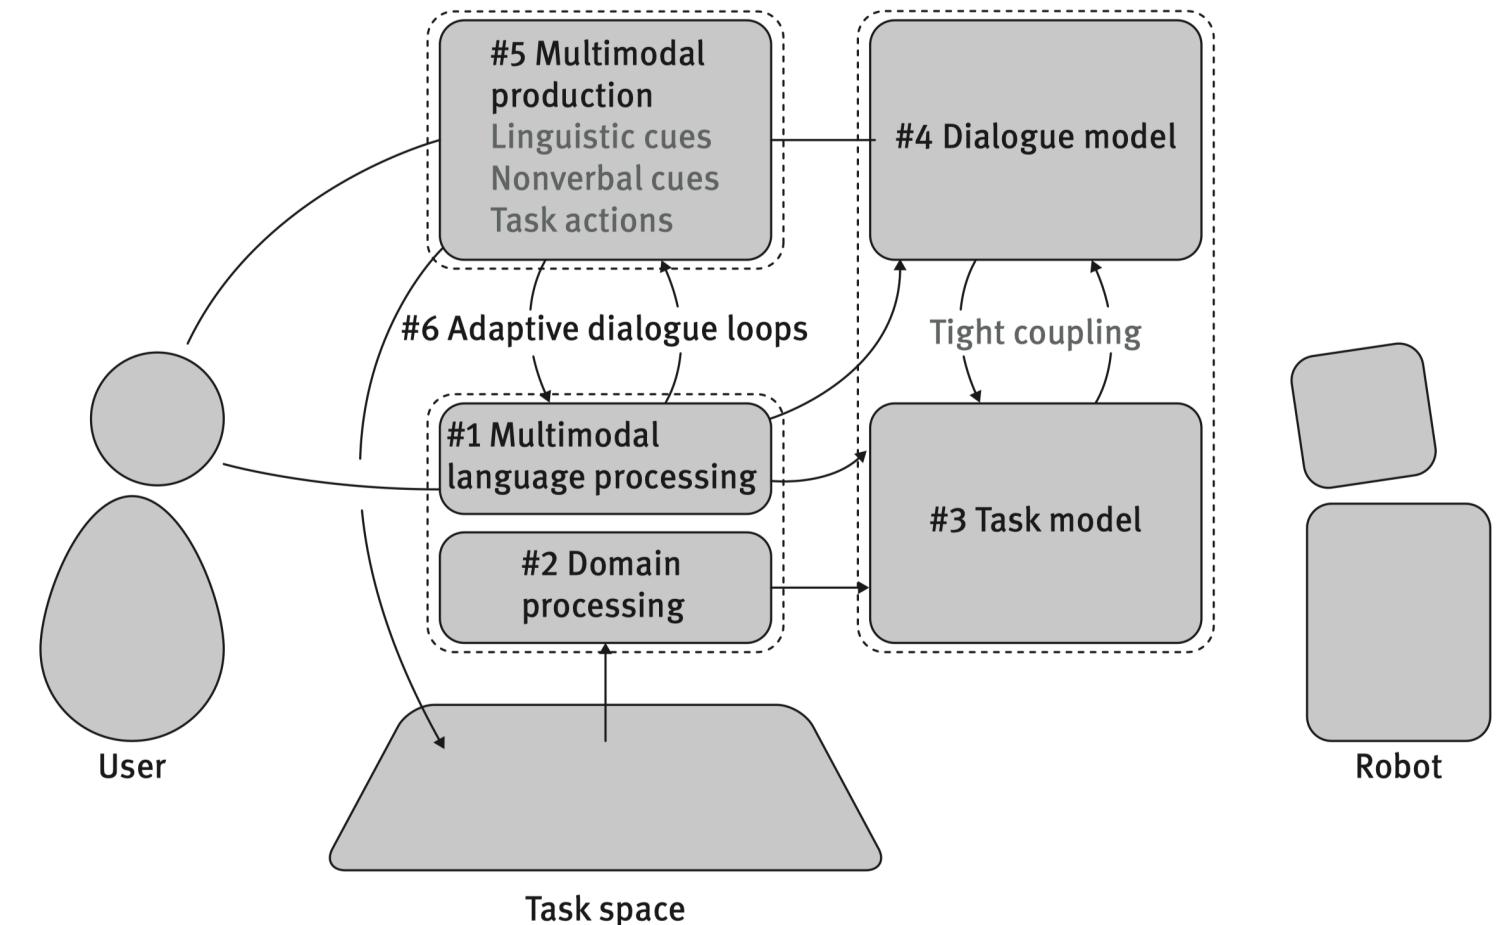

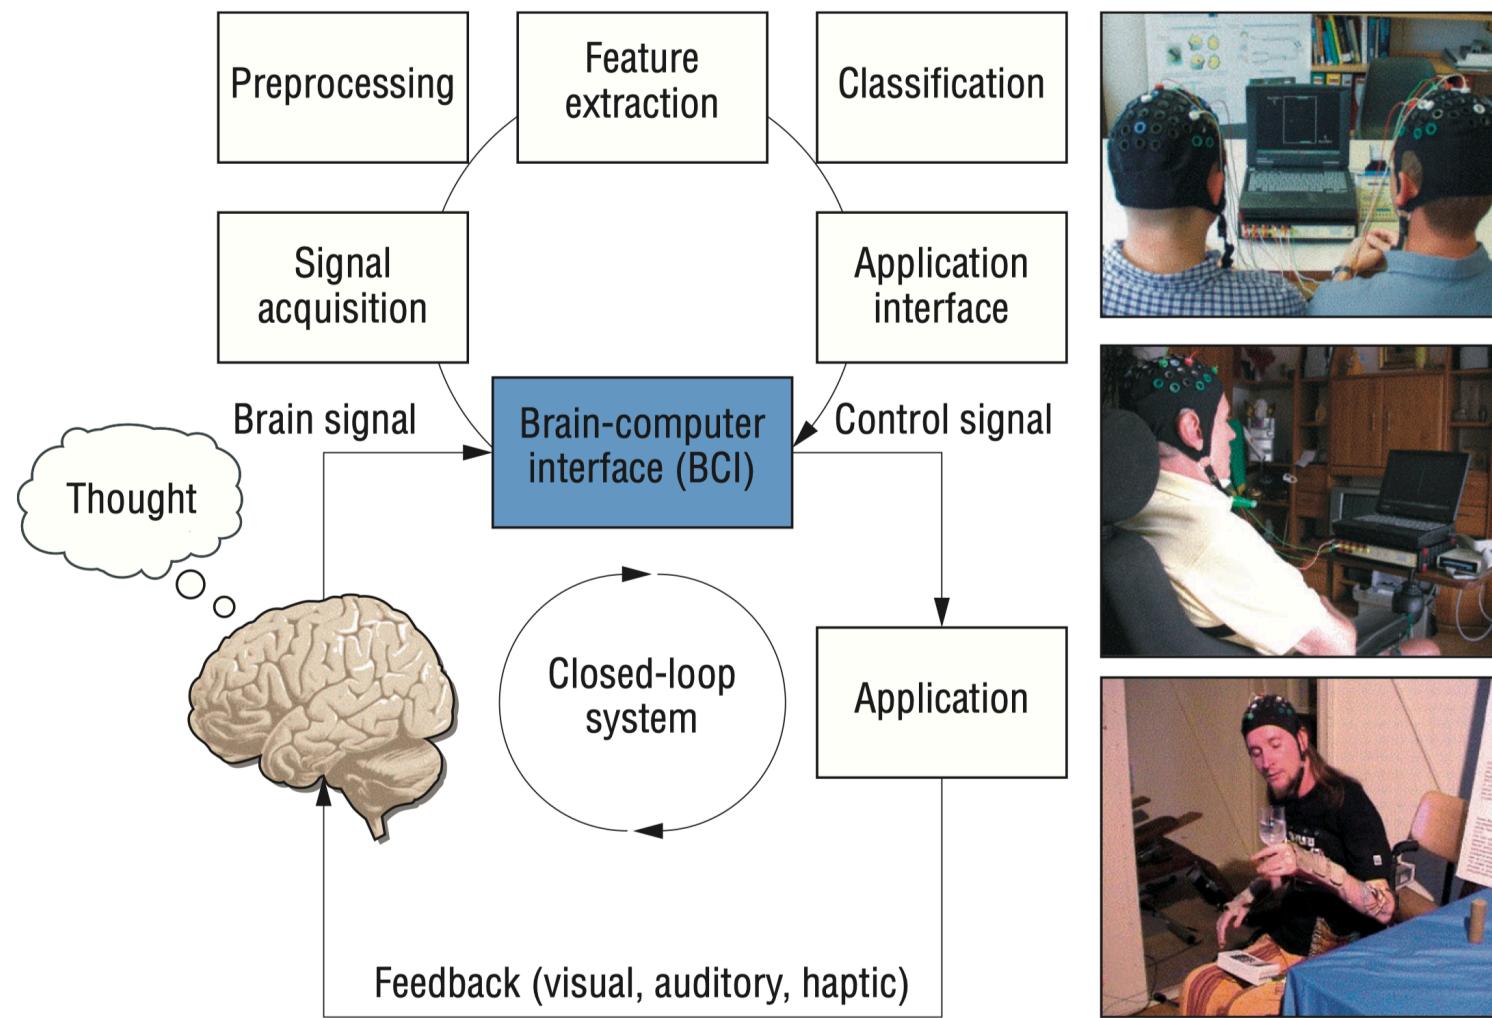

Physiological computing enables adaptive systems to sense, recognize, and respond to user affective, cognitive, and cognitive states.

These systems integrate the **biocybernetic loop**:³

1. Collect psychophysiological data from users
2. Filtering, quantify data to operationalize psychological constructs
3. Analyze data to quantify or label the state of the user
4. Determine an appropriate response based on the magnitude or label

³Pope et al., 1995, Biocybernetic system evaluates indices of operator engagement in automated task

What do these systems look like?⁴ ⁵

⁴ Nijholt et al., 2008, Brain-computer interfacing for intelligent systems

⁵ Mutlu et al., 2014, Enabling Human-Robot Dialogue

What are challenges in physiological computing?

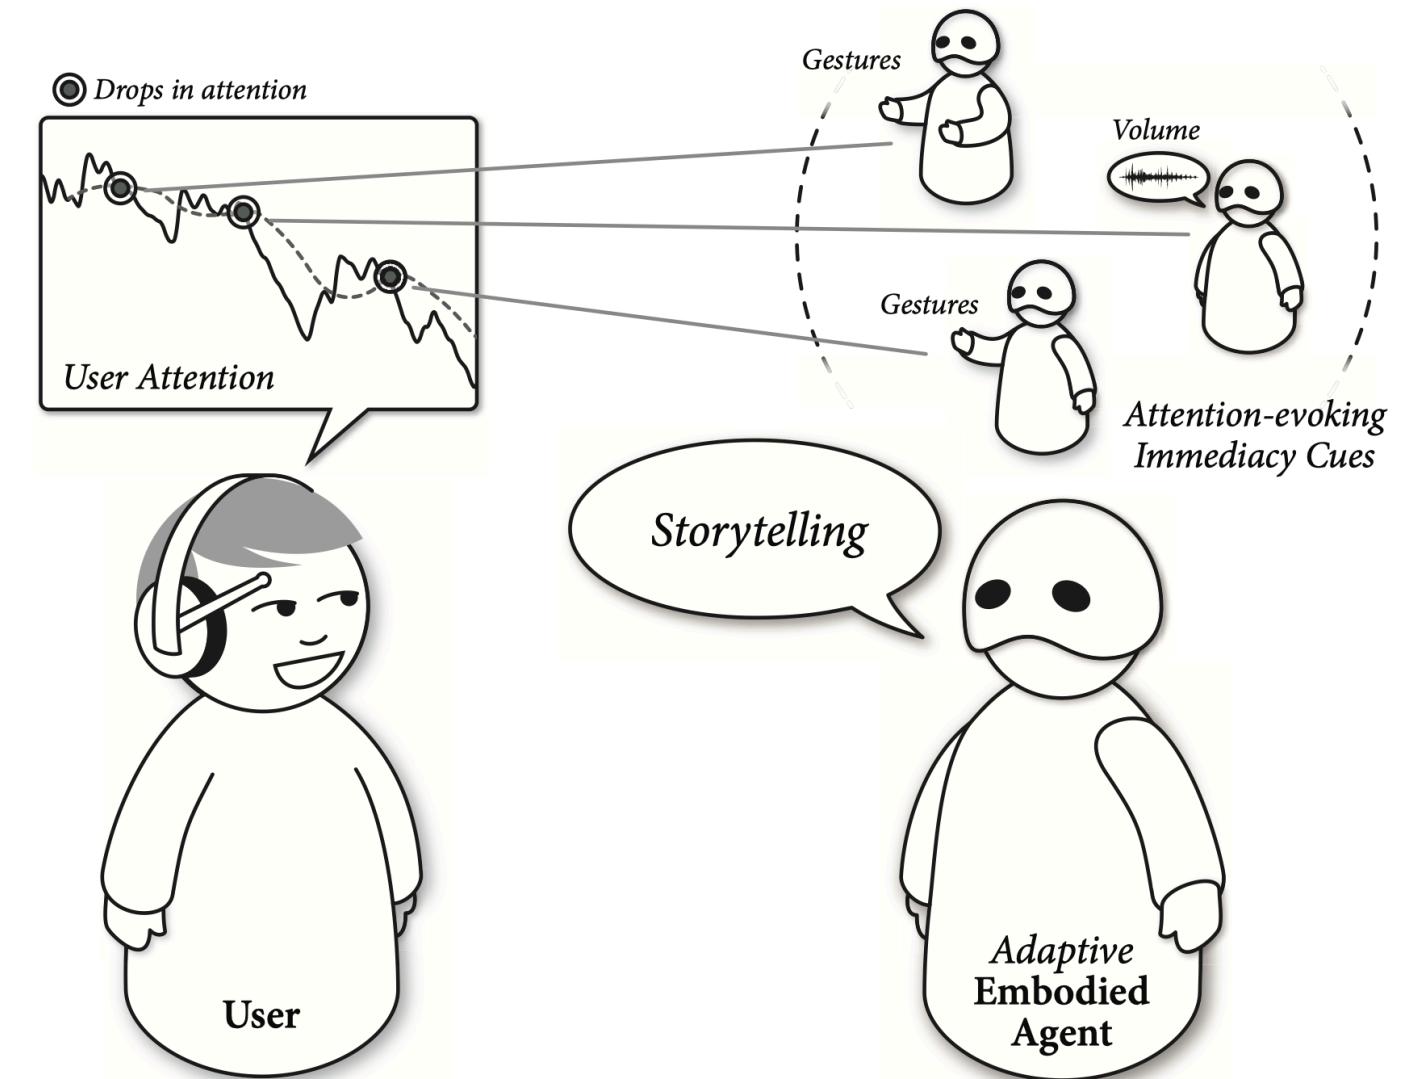

1. **Justification:** Applications can be limited, poorly justified⁴
2. **Technology:** Sensors, systems need development, refinement⁴
3. **Inference:** Difficulty of inferring psychological states¹
4. **Validity:** Content, concurrent validity; reliability¹
5. **User representation:** Sophisticated, operationalizable, appropriate¹
6. **Design:** How should adaptivity be conveyed to users?¹
7. **Ethical issues:** Privacy, user autonomy, transparency¹

⁴Nijholt et al., 2008, Brain-computer interfacing for intelligent systems

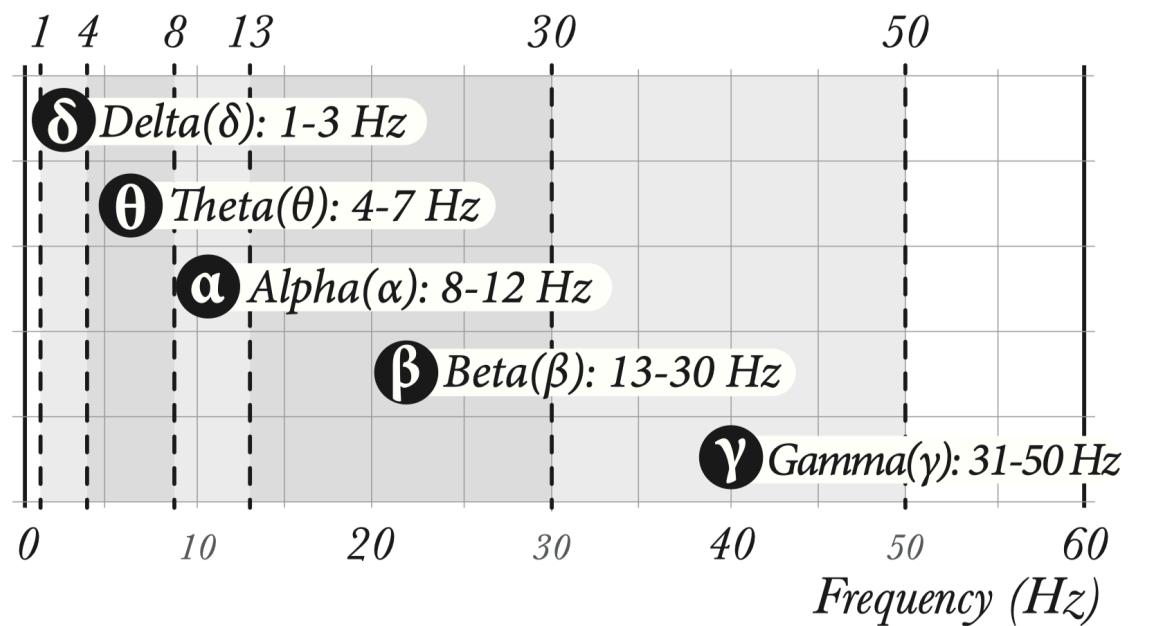

¹Fairclough, 2008, Fundamentals of physiological computing

Physiological Computing System Example¹²

Research Question: How can adaptive agents monitor changes in student *attention* in real time and regain diminished attention?

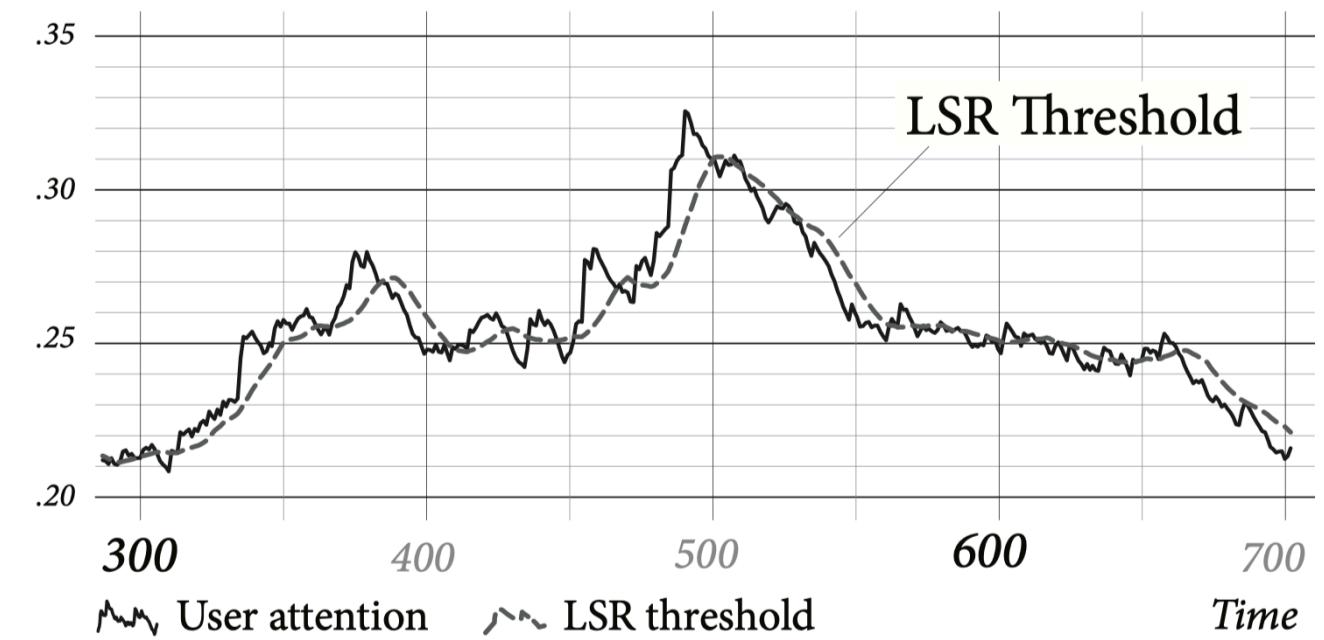

¹² Szafir & Mutlu, 2012, Pay Attention! Designing Adaptive Agents that Monitor and Improve User Engagement

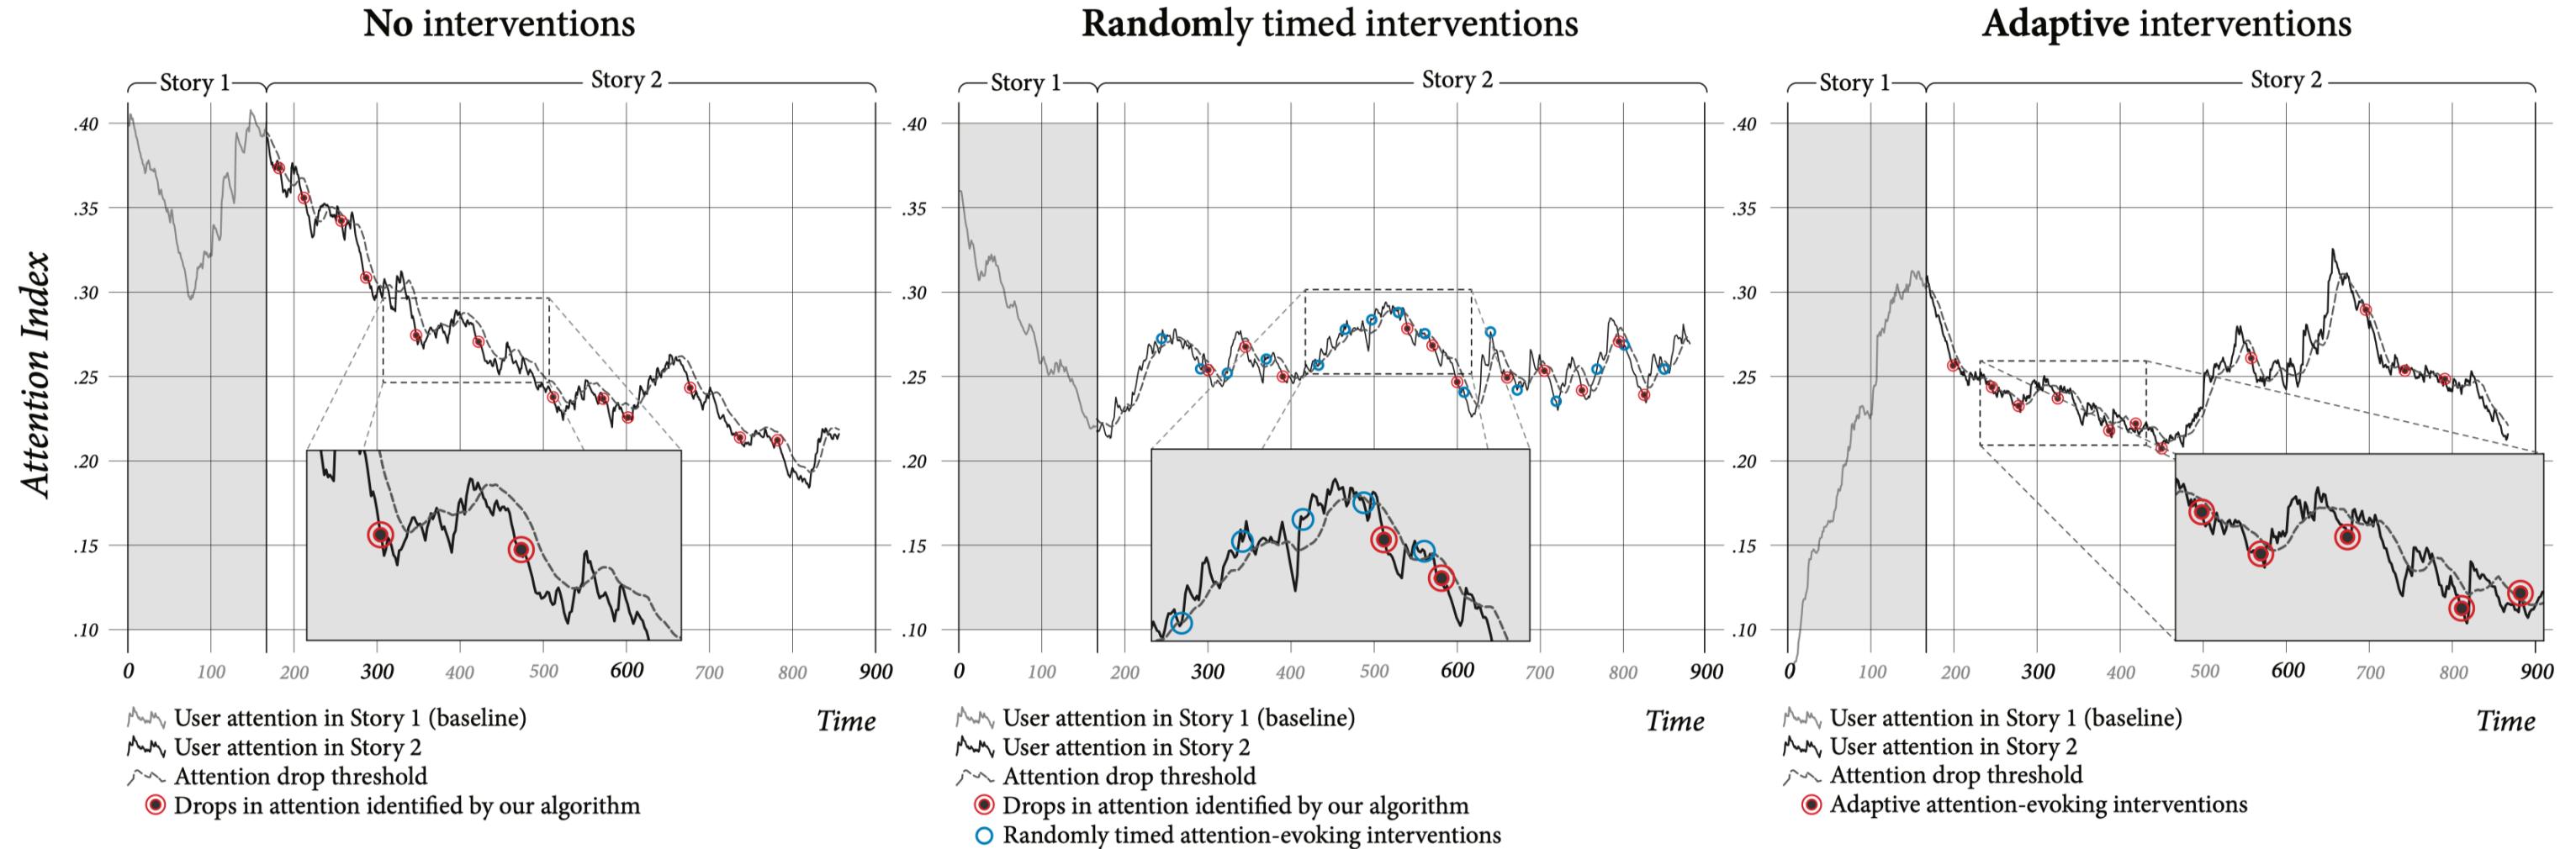

Band	Function	Example activities
Delta	Instinct	Survival, deep sleep, coma, repair, complex problem solving
Theta	Emotion	Drives, feelings, dreams, creativity, insight, deep states
Alpha	Consciousness	Aware of the body, integration of feelings, alert and peaceful, reading, meditation
Beta	Thought	Perception, mental activity, thinking, focusing, sustained attention
Gamma	Will	Extreme focus, energy, ecstasy, learning, cognitive processing

$$E = \frac{\beta}{(\alpha + \theta)}$$

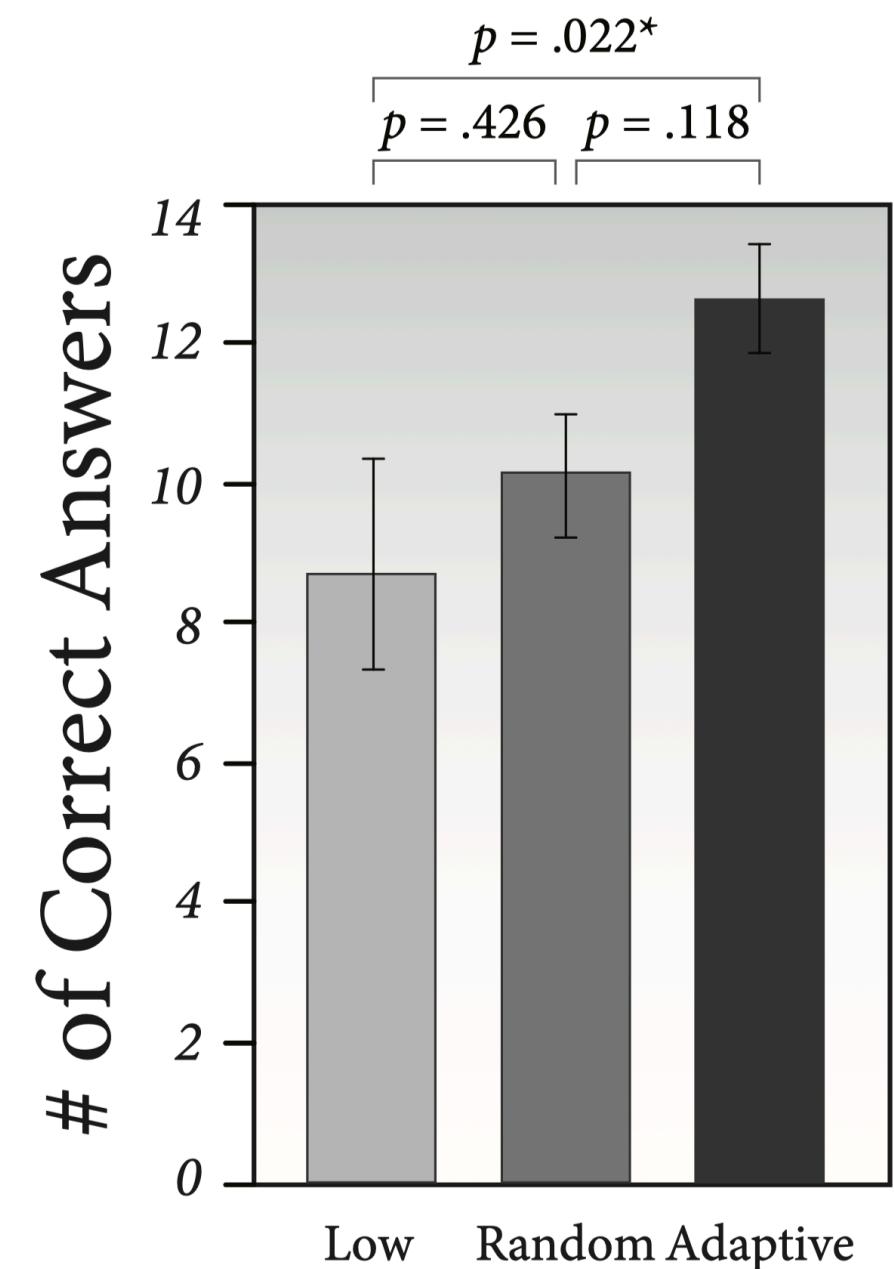

Conclusions

1. We can detect loss in attention in real time with a non-invasive method;
2. Lost attention has a negative effect on information recall;
3. By recapturing attention, we can mitigate some of this effect

Discussion Questions

- » How do we overcome the challenges in designing physiological computing systems?
- » What are application areas where physiological computing is well-justified and promising?
- » What physiological computing systems do you use?
- » What external resources did you find?
